

Ride the Range Training program

Training means different things to different people. For some cyclists, preparing for a challenging event such as Ride the Range, will be a means to a specific and very clear end; an improved Strava time on the Col du Blanchview perhaps or even the ultimate challenge of the 200k 'double climb'!

For the majority however, it may simply be the achievement and satisfaction of conquering Queensland toughest one day cycling challenge. As such, Peak Performance's Physiotherapists and experienced cyclists David Veal and Matt Haswell have designed a tailor-made 10-week program to guide riders of all ages and abilities to achieve their individual and personal goals on the day.

While not everyone needs to emulate or follow our training guide pedal stroke by pedal stroke, we would suggest you adapt elements of the program to your own personal riding needs. Without doubt weekly long rides and regular hill climbing will have their benefits, aside from just making your Strava posts look impressive.

Long rides and hill repeats improve muscle and lung function and endurance; they increase blood supply and they build strength. But most importantly they build mental toughness; if a rider can endure long training rides augmented with regular altitude training, the charisma packed Ride the Range becomes less of a challenge.

Both David and Matt are keen to help and advise individual entrants; do not hesitate to book an appointment either in person or by telephone at Peak Performance Sports Physiotherapy <https://www.peakssportsphysio.com.au/>

Training Zones	Intensity	RPE (Rating of Perceived Exertion)	Feeling
Zone 1	Recovery	1-3	This intensity should be perceived as VERY EASY.
Zone 2	Aerobic	3-5	This intensity is EASY and should be able to be maintained for multiple hours.
Zone 3	Tempo	5-6	This intensity is MODERATE. You should be able to maintain this intensity for long periods but you will notice fatigue will slowly build.
Zone 4	Threshold	6-9	This intensity is perceived as HARD and efforts are maintained from 8-20min. This intensity is important to train for the climb back up the range.
Zone 5	Above Threshold	9-10	This intensity is VERY HARD. These efforts can only be maintained for 1-8min.

112km
